

ABSTRACT OF THE DISCLOSURE

An electric device includes a read only memory (ROM) storing a condition setting program which sets operation conditions and the like of the electric device in accordance with data. When a user changes the operation conditions and the like of the electric device, the user access a homepage of the electric device from his or her own cellular phone, inputs necessary information and command through the cellular phone. When the electric device receives the command, the condition setting program sets the operation conditions in accordance with the received command.
